HANDHYGIENE
FOR HEALTHCARE PROFESSIONALS

PROFESSIONAL
Hand Hygiene®

HAND HYGIENE
YOUR FIRST-LINE DEFENSE

The World Health Organization World Alliance for Patient Safety reported that hand hygiene is considered the most important measure to prevent and control health care associated infections.[1] That's why Medline has assembled a comprehensive hand hygiene compliance program to complement specific products that make effective hand hygiene possible.

Medline's Hand Hygiene Compliance Program includes:

- **Training: Online & Onsite**

- **CE credits**

- **Individual awards** for caregivers

- **Facility self-assessments**

- **Financial modeling** for administrators

- **Educational tools for patients and their families** on the importance of clean hands

- **Placards** to promote the hand hygiene message

- **Validation kit** for competency training on hand sanitizing technique

Along with the compliance program, Medline offers a broad portfolio of products that support evidence-based recommendations. This brochure outlines many of those choices. Your Medline representative can help you find the right approach for you and your facility—that addresses your requirements and respects your budget.

1. http://whqlibdoc.who.int/hq/2009/WHO_IER_PSP_2009.07_eng.pdf - summary of guidelines can be found on the World Health Organization website, http://www.who.int/gpsc/5may/tools/en/index.html

5 STRATEGIES FOR HAND HYGIENE IMPROVEMENT

1. SYSTEM CHANGE. Ensure that the necessary infrastructure is in place to allow health-care workers to practice hand hygiene. Build a network of hand hygiene sites that are as near to the point-of-care as possible.

2. TRAINING & EDUCATION. Implement training programs on the how, when and why of hand hygiene. See that caregivers understand the reason for hand hygiene is improving patient outcomes.

3. EVALUATION & FEEDBACK. Monitor your individual and overall hand hygiene compliance, provide prompt feedback and report trends over time.

4. REMINDERS. Prompt and remind health-care workers about the importance of hand hygiene and about the appropriate indications and procedures for performing it.

5. CLIMATE OF SAFETY. Create an environment that promotes hand hygiene and makes it the social norm while guaranteeing consideration of hand hygiene improvement as a high priority at all levels.

Your 5 Moments for Hand Hygiene

1 BEFORE TOUCHING A PATIENT

2 BEFORE CLEAN/ASEPTIC PROCEDURE

3 AFTER BODY FLUID EXPOSURE RISK

4 AFTER TOUCHING A PATIENT

5 AFTER TOUCHING PATIENT SURROUNDINGS

EVIDENCE-BASED
RECOMMENDATIONS

from Centers for Disease Control and Prevention *and* World Health Organization

SANITIZE

If hands are not visibly soiled, use an alcohol-based hand rub for routinely decontaminating hands in all other clinical situations.[2] The following two formulations are recommended by the WORLD HEALTH ORGANIZATION for alcohol-based hand rubs: ethanol 80% (v/v) or isopropyl alcohol 75% (v/v).[3]

The FDA and CDC have recommended alcohol concentrations between 62 and 95% as far back as 1994.[4] More recent research published in The Lancet recommends a minimum concentration of 80% v/v ethanol.[5] Research appears to be trending toward higher alcohol content for greater efficacy.

Ultimately, adherence to recommended hand-hygiene practices should become part of a culture of patient safety, where a set of interdependent quality elements interact to achieve a shared objective.[6] See the Instant Hand Sanitizers section for additional guidance on when alcohol rubs are appropriate.

CLEANSE

When hands are visibly contaminated or soiled with blood or other body fluids, wash hands with plain or antimicrobial soap and water.[1] See the Plain Soaps section for additional guidance on when soap and water is appropriate.

CARE

Irritant contact dermatitis is the primary reason for [hand hygiene] failure.[7] Based on CDC guidelines, hand lotions and creams can increase skin hydration and replace altered or depleted skin lipids that contribute to the barrier function of normal skin. Several controlled trials have demonstrated that regular use (e.g., twice a day) of such products can help prevent and treat irritant contact dermatitis caused by hand-hygiene products.[8]

Contents

INSTANT HAND SANITIZERS

When to Use

Use an alcohol-based hand antiseptic BEFORE:
- Direct contact with a patient.
- Donning sterile gloves to insert a central line, urinary catheter, peripheral vascular catheter or other non-surgical invasive device.
- Moving from a contaminated body site to a clean body site during patient care.

Use an alcohol-based hand antiseptic AFTER:
- Direct contact with patient skin, body fluids, mucous membranes, non-intact skin and wound dressings.
- Direct contact with objects in the immediate vicinity of the patient
- Removing gloves.

How to Use

1. Start with clean, dry hands. Wash FIRST if needed.
2. Spread the recommended amount from fingertip to wrist.
3. Don't miss fingertips, nails, cuticles, finger webs and back of hands.
4. Rub thoroughly: between fingers, palm-to-back, palm-to-palm and thumb-in-palm for both hands.
5. Monitor yourself, monitor your colleagues and speak up.

Be Safe With Alcohol-Based Hand Antiseptic

There are distinct dispenser size and installation requirements that your Medline representative can discuss upon request, but here are a few to keep in mind.

Alcohol-based antiseptics (sanitizers) should be stored away from high temperatures or flames. State and local fire codes vary and should always take precedence at your facility. However, the National Fire Protection Agency's Life Safety Code (2009) makes these recommendations:
- Corridors where dispensers are installed must be at least 6 feet wide.
- Dispenser capacity should be 1.2 L or less in rooms and corridors and 2.0 L or less in suites of rooms.
- Dispensers must be located at least 4 feet from each other and never near an ignition source.
- Dispensers over carpeted surfaces are allowed only when the area is sprinklered.
- No more than an aggregate of 10 gallons of sanitizer can be in use in a single smoke compartment.
- More than 5 gallons stored in a single smoke compartment must comply with NFPA 30 Flammable and Combustible Liquids code.
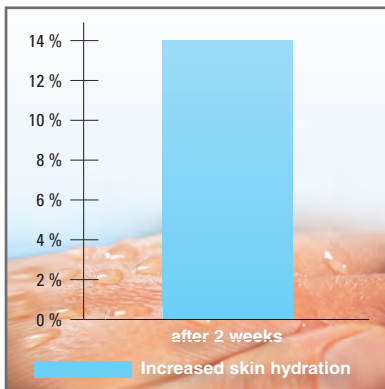

F Feels Great — Hydrates Skin

E Elevated Alcohol Kills Germs

E Evaporates Quickly

L Less Product Needed

Increased Skin Hydration

Sterillium Comfort Gel® increases skin hydration 14% after only two weeks of product usage compared to untreated skin.[1]

[1]Independent Skin Care Study / Skin Hydration. Data on file.
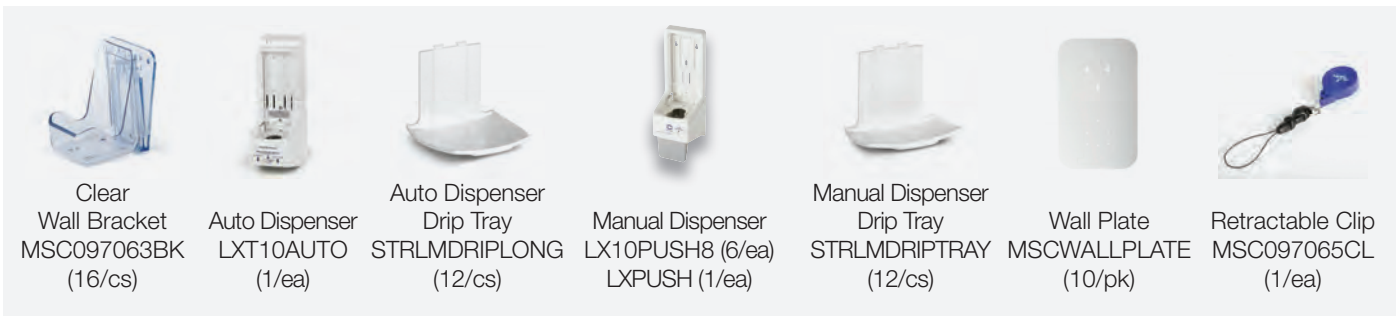

Sterillium Comfort Gel®
Efficacy. Comfort. Compliance.
- Effective against a broad range of pathogens within 15 seconds[2]
- 85% ethyl alcohol w/w formulation
- Only 2.4 ml per application
- Improves skin hydration 14% after two weeks compared to untreated skin[2]

SURGICAL SCRUBS

MSC097060 in
LXT10AUTO dispenser

*Features a switch that controls
the quantity of Sterillium® Rub
dispensed: one, two, or three
measured doses at one time.*

Steps for Using Surgical Hand Scrub

Prior to first case of the day...
1. Remove rings, watches and other jewelry.
2. Use a nail pick (keep nails short, no artificial nails)
   to remove debris.
3. Scrub hands and forearms with either an antimicrobial
   or plain soap according to manufacturer-recommendation.
4. Apply an alcohol-based surgical scrub.
5. Don sterile gloves.

Then continue to repeat steps 4-5
throughout the remainder of the day.

Sterillium® Rub Surgical Hand Scrub

- 80% w/w ethyl alcohol for rapid and comprehensive kill
  of transient and resident skin flora[1]
- Waterless surgical scrub
- Long-lasting persistent effect exceeds FDA requirements[1]
- Protects skin with emollients, drives compliance
- Non-sticky, quick-evaporating formula for easy gloving

PLAIN SOAPS

When to Wash

Wash hands with soap & water—
- If visibly dirty or are contaminated with blood, fluids, or proteinaceous material.
- Before eating.
- After toileting.
- When *C. difficile* or *B. anthracis* is suspected or confirmed.

How to Wash

1. Wet hands with warm—not hot—water.
2. Lather with soap from wrist to fingertip, scrubbing at least 15 seconds.
3. Don't miss between fingers, under nails, back of hands, and nail beds.
4. Rinse well in running water, low in the sink to prevent splashing.
5. Dry on a clean disposable towel and use it to turn off the faucet and open the door.
